

10th Feb 2010

Dear Michael,

Just a quick note to say how pleased we are with the Enershield air barrier installation. They have now been installed in our frozen store for 3 months and during that time we no longer have any ice jamming the chiller units, no frost build up on the product; the PVC strip curtains which were usually thick with ice and frost are now transparent again and there is no ice on the floor.

We haven't analysed the decrease in power consumption yet, but with the Enershield units keeping out the ambient air and the increased efficiency of the chiller units, we have been able to reduce chiller settings. We also plan to reduce the maintenance of the chillers as they are now on lighter duty and frost damage has been stopped. Another big bonus is that we can really cut down the number of times that we need to carry out a full room de-frost.

Finally I would like to thank you and the project team for the time and effort you put in to ensure that the installation was a success. Without any doubt whatsoever our initial scepticism of the system has been proven wrong and after your team made the final tweaks to get the flow just right, the result is beyond our expectations.

Yours truly,

Roy Stewart
